Hi Steve,

Thanks for the message. I checked with Dr. Armstrong and he received the supps today. However, to complete the study he will require 28 more bottles of each! The total number of capsules is:

$40 \text{ subjects} \times 6 \text{ caps/day} \times 56 \text{ days} = 13,440$

Obviously, only 4800 caps were sent (40 bottles  $\times$  120 caps/bottle). So  $13,440/4800 = 28$  more bottles.

The study will be able to begin, of course, but EMU will need the extra bottles ASAP.

Many thanks for your help.

Tim

>Tim,

> Today we have forwarded via UPS to Dr. Jeff Armstrong @ Eastern Michigan University, the newest formulation of XENADRINE. Mel has asked that the older bottles be destroyed, and that only these be used for the study. There are 40 bottles each of XENADRINE and placebo. You, me and Mel are at the moment the only three that know which are the real and which are the placebo. Please advise Dr. Armstrong to expect delivery on Monday, 4/10/2000.
